 ABOUT US

Why was Valion created?

Traditional valuations take days or weeks and rely on costly specialists. This can slow down crucial decisions such as investment rounds or mergers.

Valion automates this process by combining proven financial methodologies with AI, producing fast, traceable, and reliable valuation reports in just minutes.

A very simple and fast model

"I was truly pleasantly surprised by the flexibility and agility in building a very simple and quick model, which is appreciated compared to the complex models used by investment banks. Furthermore, the tool allows you to carry out a valuation of a company, without the support of an investment banker, playing with the variables that you identify the levers that can be used to increase the company's value. I hadn't seen a tool like this before, and it's definitely highly recommended. Above all, and no less important, is the cost of the valuation with the tool."

A screenshot of a contact form on a website. The form is titled "CONTACT" and "Shall we talk?". It includes fields for First name, Last name, Email, Company, and Customer Type (a dropdown menu). There is also a large text area for Comments. Below the form, there are two checkboxes for consent: one for accepting the privacy policy and another for receiving commercial communications. A "Send" button is at the bottom right of the form. The footer of the page shows the Valion logo, "Powered by Citryn", and links for Privacy Policy, Terms of Use, and Cookies.

Miguel

Hello everyone, we are **Group 7** — Miguel, Diego and Julián.

Today we're going to talk about a company website called **Valion**.

It's a digital platform that helps users calculate the **valuation** of their companies in real time.

Let's start by explaining what the website does.

When you open your **browser** and type the Valion address, you'll see a very clean and modern **website**.

On the home page, the slogan says "*Valuation Made Simple*".

The platform provides **real-time valuation** with the precision of an analyst but using the speed of **artificial intelligence**.

Basically, it helps you **execute** complex financial calculations automatically, so that companies can know their market value in minutes instead of days.

There are two main buttons on the first page: one to *request access*, and another to *calculate your valuation*.

Both are **hyperlinks** that take you directly to different sections where you can start using the service.

Diego

In the “About Us” section, Valion explains **why it was created**.

Traditional valuations usually take a long time and depend on expensive specialists.

Valion solves this by combining **financial methodology with artificial intelligence**.

It produces fast, traceable, and reliable reports.

Then we can see another section called **Services**, where the company describes two main offers:

- **Valuation-as-a-Service**, which means anyone can get professional valuations without technical complexity.
- **Business Intelligence**, which analyzes the company’s data to understand its **real market value**.

These services help executives and investors make better decisions quickly.

Julián

The next part of the page is called **Solutions**.

Here we see that Valion is for companies, investors, and even academic institutions.

There are four main options:

1. **Appraisal**, to generate professional valuation reports.
2. **Portfolio**, to analyze investment opportunities.
3. **Academy**, to teach financial concepts.
4. **Start**, to understand a company’s value with clear and fast reports.

Below that, we can see **partners and clients**, like *Tadaima*, *Onirix*, and *Statista*. These collaborations show that Valion is trusted by many organizations.

Finally, at the bottom of the website there is a contact form under “*Shall we talk?*”, where you can send your information to the Valion team.

Miguel (closing)

There is more pages like the about us, the frequently asked questions, etc... improvisation.

Thank you for listening — that was our presentation about **Valion!**
